Test Report

1. Client

- Name : WIZNET Co., Ltd.
- Address : 5F Humax Village, 216, Hwangsaoul-ro, Bundang-gu,
Seongnam-si, Gyeonggi-do, Republic of Korea

2. Use of Report : CE DoC

3. Sample Description :

- Model W6300-EVB-Pico
- Kind of Product iEthernet Module
- Variant Model Name -

4. Date of Receipt : 2025. 08. 07

5. Date of Test : 2025. 08. 23 ~ 2025. 08. 27

6. Test Method : EN 55032:2015/A1:2020, CLASS A
EN 55035:2017/A11:2020
EN 61000-3-2 : 2019/A1:2021
EN 61000-3-3 : 2013/A1:2019

7. Test Results : Complied

- ※ The results shown in this test report are the results of testing the samples provided.
- ※ This test report is prepared according to the requirements of ISO / IEC 17025.

4.1 Product Specification

EUT Power Source : AC 230 V / 50 Hz
EUT Highest frequency: 25 MHz

4.2 EUT Modification

- N/A

4.3 General Information

- ☒ Table-Top
 ☐ Floor – Standing
☐ Table-Top & Floor-Standing (Combination)

4.4 Configuration of the equipment under test

Equipment	Model	Manufacture	Serial No.
USB mouse	B100	LOGITECH	1802HS08MFV8
USB keyboard	km100	HP	-
PC	NCORE	ABKO	-
monitor	27TQ625SW	LG	312NTFAAC427
monitor Adapter	AD2137S20	BAO HUI SCIENCE & TECHNOLOGY CO.,LTD	-
headset	FS-850	FUSION FNC	-

Type	Description	Connection	Spec.	Length(m)
EUT	USB TYPE C	PC	USB TYPE A	1.5
	LAN	PC	LAN	5.0

Display Observation Distance	1.2 m
The type of cable used to test the networking functionality	CAT.5 (NO SHIELD)
Data rate when testing networking functionality	100 Mbps
The level selected during the audio output function test	-

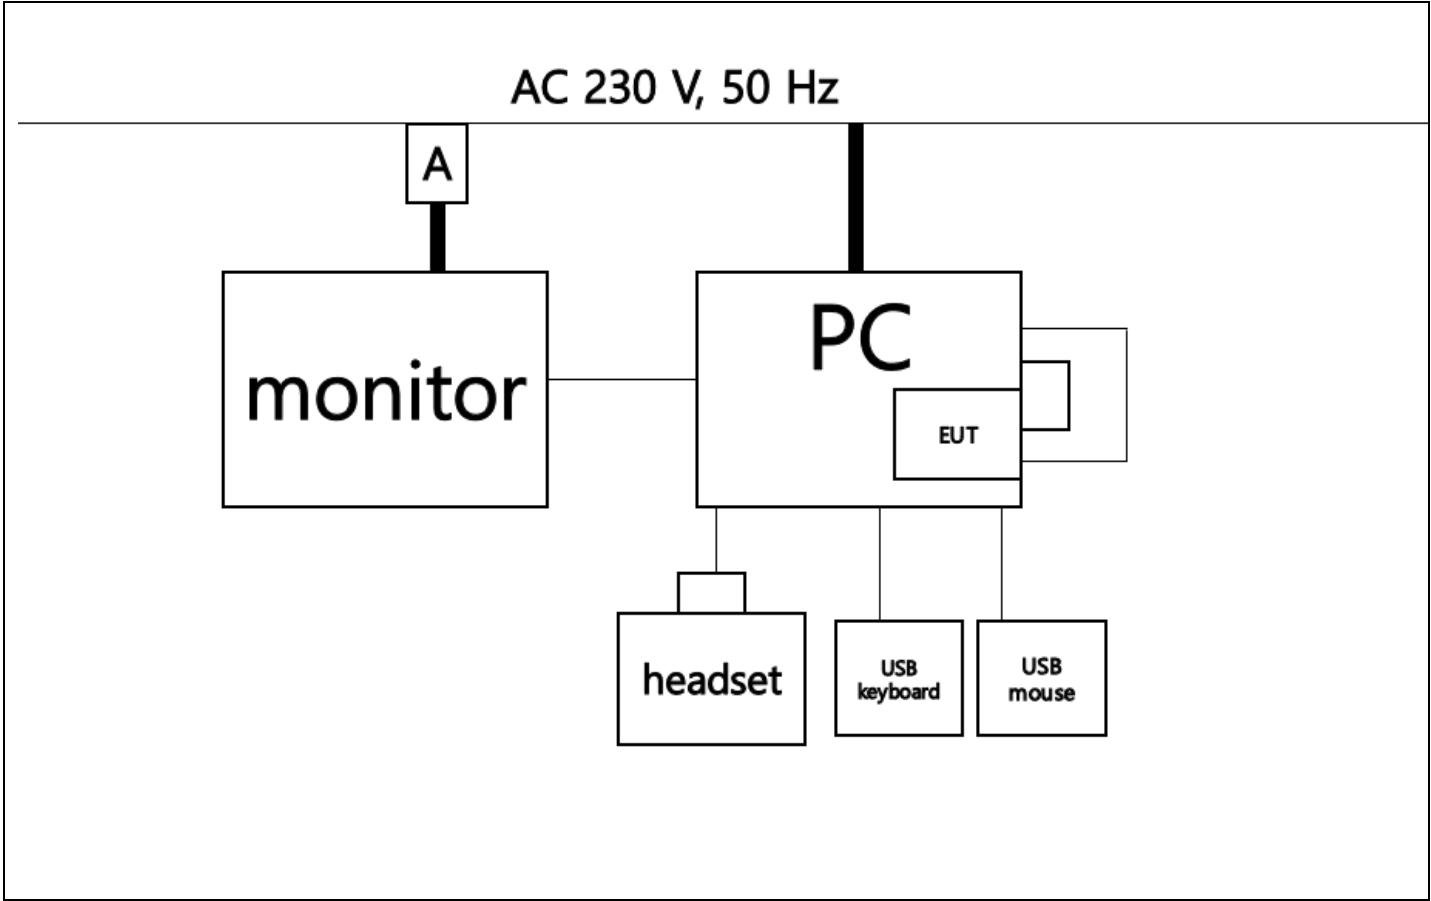

4.5 Operating Conditions

The equipment under test was operated during the measurement under following

Test mode	Normal Operating
1	Power on the EUT, enter the PC IP (192.168.0.4), gateway (192.168.0.1), and PC port (5000). Then, use the vendor-provided program (Hercules Tool) to verify operation and test.
2	LAN – Test in Ping Test Mode.

* Electromagnetic Conductivity Test (Communication Port) was performed using the program (IBM Exerciser – 100 Mbps).

4.6 The drawing of general test setup

5. Summary of Test Result

5.1 Summary of EMI emission test result

EN 55032 : 2015/A1:2020

Electromagnetic compatibility of multimedia equipment – Emission Requirements.

Test items		Result
Conducted Emission (Power Line)	EN55032:2015/A1:2020	Pass
Conducted Emission (Telecommunication Line)	EN55032:2015/A1:2020	Pass
Radiated Emission (Below 1GHz)	EN55032:2015/A1:2020	Pass
Radiated Emission (Above 1GHz)	EN55032:2015/A1:2020	Not application

EN 61000-3-2 : 2019/A1:2021

Limits for harmonic-current emissions (equipment input current up to including 16A per phase)

Test items	Test methods	Result
Harmonics	EN 61000-3-2 : 2019/A1:2021	Pass

EN 61000-3-3 : 2013/A1:2019

Limitation of voltage fluctuations and flicker in public low-voltage supply systems,
for equipment with rated current $\leq 16\text{A}$ per phase and not subject to conditional connection

Test items	Test methods	Result
Flicker	EN 61000-3-3: 2013/A1:2019	Pass

5.2 Summary of immunity test result

EN 55035:2017/A11:2020

Electromagnetic compatibility of multimedia equipment – Immunity Requirements.

Test items	Test methods	Result
Electrostatic discharge	EN 61000-4-2:2009	Pass
Electromagnetic field	EN 61000-4-3:2006/A2:2010	Pass
Electric fast transients	EN 61000-4-4:2012	Pass
Surge	EN 61000-4-5:2006	Pass
Conducted Immunity	EN 61000-4-6:2009	Pass
Magnetic field Immunity	EN 61000-4-8:2010	Not application
Voltage dip/interruption	EN 61000-4-11:2004	Pass

5.3 Performance criteria

Performance criterion A

The equipment shall continue to operate as intended without operator intervention. No degradation of performance, loss of function or change of operating state is allowed below a performance level specified by the manufacturer when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.

Performance criterion B

During the application of the disturbance, degradation of performance is allowed. However, no unintended change of actual operating state or stored data is allowed to persist after the test.

After the test, the equipment shall continue to operate as intended without operator intervention; no degradation of performance or loss of function is allowed, below a performance level specified by the manufacturer, when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance.

If the minimum performance level (or the permissible performance loss), or recovery time, is not specified by the manufacturer, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.

Performance criterion C

Loss of function is allowed, provided the function is self-recoverable, or can be restored by the operation of the controls by the user in accordance with the manufacturer's instructions. A reboot or re-start operation is allowed. Information stored in non-volatile memory, or protected by a battery backup, shall not be lost.

6. Test Results

6.1 Conducted Emission

Environmental Conditions

Temperature	(23.5 °C)
Humidity	(38.0 % R.H.)
Test Area	Conducted Room
Test date	2025.08.27

6.1.1 Limits of conducted emission measurement

* Class A equipment

Frequency range (MHz)	Coupling device (EN 55032 see table A.7)	Detector type / bandwidth	Class A limits (dB(μV))
0.15 to 0.50	AMN	Quasi Peak / 9 kHz	79
0.50 to 30			73
0.15 to 0.50	AMN	Average / 9 kHz	66
0.50 to 30			60
* Apply across the entire frequency range.			

* Class B equipment

Frequency range (MHz)	Coupling device (EN 55032 see table A.7)	Detector type / bandwidth	Class B limits (dB(μV))
0.15 to 0.50	AMN	Quasi Peak / 9 kHz	66 – 56
0.50 to 5			56
5 to 30			60
0.15 to 0.50	AMN	Average / 9 kHz	56 – 46
0.50 to 5			46
5 to 30			50
* Apply across the entire frequency range.			

6.1.2 Measurement procedure

Mains

The measurements were performed in a shielded room.

EUT was placed on a non-metallic table height of 0.8 m above the reference ground plane.

The rear of table was located 0.4 m to the vertical conducted plane.

EUT was power through the LISN, which was bonded to the ground plane.

The LISN power was filtered. Each EUT power lead, except ground (safety) lead, was individually connected through a LISN to input power source.

All I.O cables are positioned to simulate typical actual usage according to the test standard.

Both lines of power cord, hot and neutral, were measured.

6.2 Conducted Emission(Telecommunications/network)

Environmental Conditions

Temperature	(23.5 °C)
Humidity	(38.0 % R.H.)
Test Area	Conducted Room
Test date	2025.08.27

6.2.1 Measurement procedure

Telecommunications/network

All power was connected to the system through Artificial Mains Network (AMN). All tested telecommunications lines were connected to an Asymmetric Artificial Network (AAN) and conducted voltage measurements on telecommunications lines were made at the output of the AAN. Where an AAN was not appropriate or available measurements were made using a Capacitive Voltage Probe and Current probe.

* For Ethernet interfaces, measurements are required at the highest data rate supported by the interface.

1 to 3	3	Average / 1 MHz	50
3 to 6			54
1 to 3		Peak / 1 MHz	70
3 to 6			74

6.3.2 Measurement procedure

Mains

A test was performed at 3m & 10m distance in a semi-anechoic chamber for searching correct frequency. The final test was done at a 10m/3m semi-anechoic chamber with a quasi-peak detector peak detector & average detector.

EUT was placed on a non-metallic table height of 0.8m above the reference ground plane.

Cables were folded back and forth forming a bundle 0.3m to 0.4m long and were hanged at a 0.4m height to the ground plane.

Cables connected to EUT were fixed to cause maximum emission.

Test was made with the antenna positioned in both the horizontal and vertical planes of polarization.

The measurement antenna was varied in height above the conducting ground plane to obtain the maximum signal strength.

6.4.1 Measurement procedure

A ground reference plane was located on the floor, and connected to earth via a low impedance connection. The return cable of the ESD generator was connected to the reference plane. In case of floor standing equipment, EUT was placed on the reference plane on 0.1 m of insulating Support.

In case of table top equipment, EUT was placed on a wooden table 0.8m above the reference grounded floor. A horizontal coupling plane(HCP) was placed on the table, and Connected to the reference plane via a 470 resistor located in each end (0.5mm insulating support between EUT and HCP).

In both cases a vertical coupling plane(VCP) OF 0.5 X 0.5m was located 10cm from the EUT's sides. The VCP was connected to the reference plane in the same matter as the HCP.

6.5 Radio Frequency Electromagnetic Fields

Environmental Conditions

Temperature	(23.8 °C)
Humidity	(39.0 % R.H.)
Test Area	RS Chamber
Test date	2025.08.23

6.5.1 Measurement procedure

The test was performed at 3m full anechoic chamber.
For floor standing equipment, the EUT was standing on the floor.
For tabletop equipment, the EUT was located on a wooden table 0.8m above the floor.
The EUT was tested all sides, horizontal and vertical polarization.
The field uniformity was calibrated for 3V/m.

Humidity	(37.0 % R.H.)
Test Area	EMC Test Room
Test date	2025.08.26

6.6.1 Measurement procedure

A ground reference plane was located on the floor.

EFT generator was connected to reference ground plane via low impedance connection.

For floor standing equipment, EUT was placed on a 0.1 m wooden table.

For tabletop equipment, EUT was placed on a wooden table(0.1m) above the reference plane.

Test generator and coupling/decoupling network was placed on, and bounded to, the ground reference plane.

When using the coupling clamp, the minimum distance between the coupling plates and all other conductive surfaces, except the ground reference plane beneath the coupling clamp, Shall be 0.5 m.

Test date	-

6.9.1 Measurement procedure

The test was performed on a ground reference plane (GRP) on a 0.1m wooden table.

The EUT was isolated 10 cm isolating support.

The ground plane was connected to floor reference ground plane via low impedance connection.

The test generator was placed 3m distance from the induction coil. The generator was connected reference ground plane.

Preliminary verification of equipment performances was carried out prior to applying the test magnetic field. The field was applied to the EUT horizontal, vertical polarization.

6.11 Harmonics

Environmental Conditions

Temperature	(23.5 °C)
Humidity	(35.0 % R.H.)
Test Area	EMC Test Room
Test date	2025.08.24

6.11.1 Measurement procedure

The equipment is supplied in series with shunt(s) Rm or current transformer(s) from a source having the same nominal voltage and frequency as the rated supply voltage and frequency of the equipment.

Measurements shall be made under normal load, or conditions for adequate heat discharge, and under normal operating conditions.

User's operation controls or automatic programmers shall be set to produce the maximum harmonic component, for each successive harmonic component in turn. For the purpose of harmonic current limitation, equipment is classified as follows :

Class A : Equipment not specified in one of the three other Classes shall be considered as Class A equipment.

- Balanced three-phase equipment;
- Household appliances excluding equipment identified as Class D;
- Tools excluding portable tools;
- Dimmers for incandescent lamps;
- Audio equipment.

Class B : Portable tools; Arc welding equipment which is not professional equipment.

Class C : Lighting equipment.

Class D : Equipment having a specified power according to 6.2.2 less than or equal to 600 w, of the following types:

- Personal computers and personal computer monitors;
- Television receivers.
- refrigerators and freezers having one or more variable-speed drives to control compressor motor(s).

Environmental Conditions

Temperature	(23.5 °C)
Humidity	(35.0 % R.H.)
Test Area	EMC Test Room
Test date	2025.08.24

6.12.1 Measurement procedure

EUT was connected to the power analyzer system.

Measurement was performed to obtain the desired flicker parameters.

The measuring time depends on which parameters are to be measured.

P_{lt} = 2 h

P_{st} = 10 min

Controls and automatic programs shall be set to produce the most unfavorable sequence of voltage changes, using only those combinations of controls and programs are mentioned by the manufacturer in the instruction manual.
